

COATED TEXTILES,
OUR KNOW-HOW

BROCHURE 2023

PLASTIBERT
COATED TEXTILES

Who we are

Plastibert & Cie nv is an international specialist in developing and manufacturing coated textiles. We are known as a flexible, reliable and solution-driven partner.

Our know-how and experience have allowed us to diversify while we constantly strive to provide innovation and quality. All our products are extensively tested, certified and recognised for their technical and aesthetic properties, which gained trust from major players in both private and public markets.

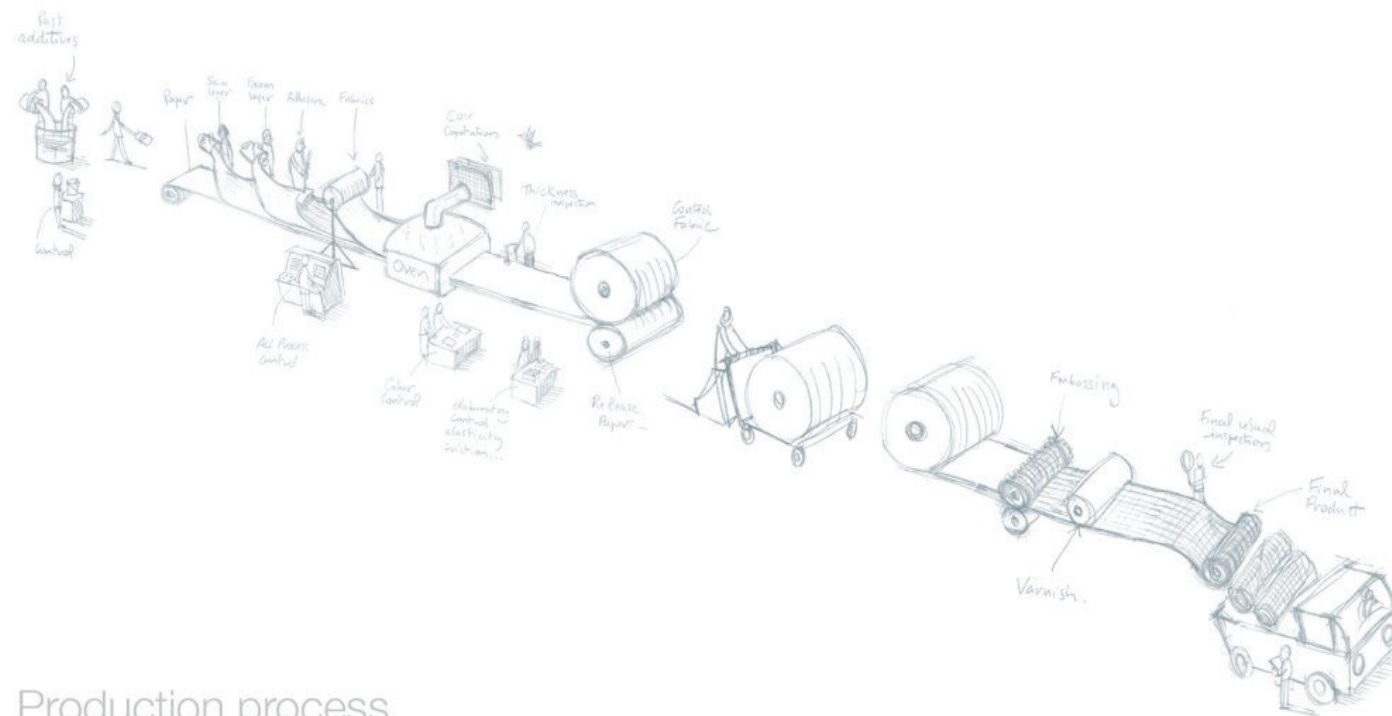

Plastibert & Cie nv is specialized in tailor made solutions and offers a stock program for different end uses. Our main markets are Automotive, Health & Well-Being, Protective Clothing, Upholstery and Digital Printing. We also develop products for specific Industrial applications.

We are part of the Duroc group. Duroc strives to build and develop a group consisting of high quality subsidiaries within different sectors. As a subsidiary we operate close to our customers and therefore have the best understanding of the market and its needs. The Group's governance model is highly decentralized and the various subsidiaries are responsible for developing their profitability.

What we do

We develop and manufacture high quality coated fabrics. We carefully select our textile bases, while choosing different textures (cloth or jersey, etc.) and materials (cotton, polyamide or polyester, etc.). We then coat them with polymers, primarily PVC and PU.

Thanks to our finishing processes, we can offer a range of aspects such as leather and textilelook. We protect the surface of our coated products with high-performance varnishes, which makes them resistant to heavy use and adverse weather conditions (light, spots, etc.).

PLASTIBERT
COATED TEXTILES

A few things from our history

- 1965** Plastibert was founded in 1965 in Beveren-Leie (BE) by the Berton brothers
- 1968** The plant (4.000m²) was moved to Bavikhove (BE)
- 1986** A new plant (22.000m²) was established in Wielsbeke (BE)
- 1997** Mecaseat Group acquired Plastibert
- 2008** Cotting Group was founded
- 2014** Plastibert creates its Digital Printing department
- 2019** The Swedish group Duroc AB acquired Plastibert
- 2023** Plastibert goes its own way within the Duroc AB Group

Research & Development

Our laboratory: an interface between development & production

Designing and producing a new collection involves the development of colours, materials and (technical) aspects. Our laboratory is specialized in developing samples and carrying out simulations, tests and several precise adjustments before launching the final products on an industrial scale.

The development and manufacturing of new products is part of our DNA. Plastibert develops new coated fabrics by anticipating market trends and listening to customers' needs. Our sales teams carefully listen to customer requirements and work in close collaboration with our laboratory on motifs, supports, colour, handle and the design of grains. Tests are carried out on the aspects, structure, and technical and physical characteristics of our coated fabrics. Everyone works in a spirit of constant innovation. This complementarity makes it possible to meet the creative, exclusive and very technical needs of our strategic accounts.

Our approach: project based & solution driven

Are you looking for a creative, intelligent and competitive solution to the challenges your company faces every day?

Plastibert offers an innovative approach, full flexibility and close collaboration exceeding the normal supplier – customer relationship.

Let us develop the unique quality you're looking for, together.

OUR PRODUCTS

PROTECTIVE CLOTHING

MAIN SPECS

- FR
- Oil resistant
- PVC & PU
- Chemical resistant
- EN 20471 High Vis
- Food contact
- EN 343
- Low temperature
- Weldable & Washable
- Arc Thermal resistance
- Antistatic
- Oekotex 100 class 1

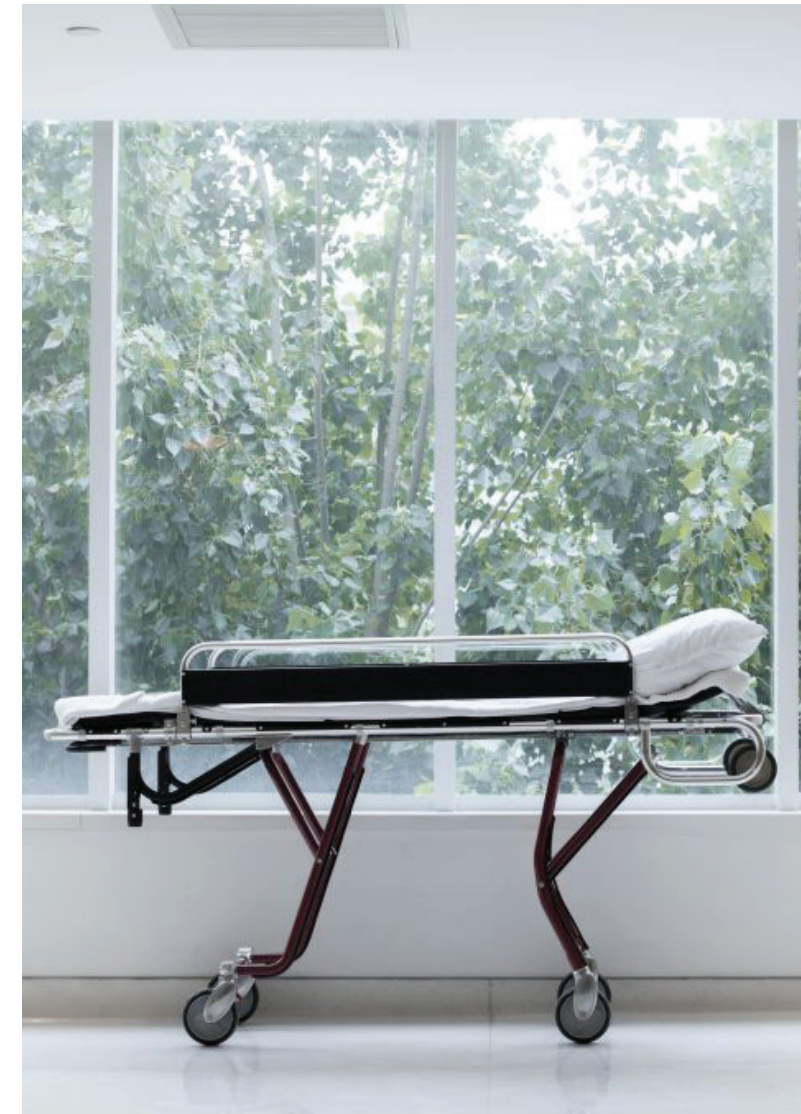

We are the European market reference when it comes to technical safety fabrics. Our coated fabrics are used for manufacturing protective garments in the following markets: fishing, agriculture, construction, oil and gas industries, etc.

MAIN SPECS

- FR
- PVC & PU
- Bi-Elastic / 4-way stretch
- Hydrostatic head
- WVP
- Biocompatibility
- Cytotoxicity
- Antibacterial
- Weldable & Washable
